Agronomy Guide for Field Crops - Publication 811

Definition of Agronomy: Is Reference to Field Crops Exact? The term agronomy is derived from the two Greek words agros, meaning field, and nomos, meaning to manage. Thus agronomy has been defined in short concise terms as the art and science of field crop production and management. But this definition does not provide a clear demarcation line with general application as to what is agronomy versus horticulture and their scopes.

What is Agronomy: Definition and Comparison with Horticulture

Agronomy is differentiated from the plant sciences of horticulture, pomology, range science, and other applied plant sciences by the specific crops considered and the scope. Agronomic crops are those that occupy large acreage, and are the bases of the world's food and fiber production systems, often mechanized.

About Agronomy - Agronomy Research & Information Center

Agronomy. Harvester used in Agronomy Research. Photo by Bill Cox. Development of improved management practices with an integrated consideration of field crops and soils. Cropping systems and farming systems that sustain or enhance the soil resource base are investigated. Economic, sociological and environmental impacts of various field crops and cropping systems also may be evaluated.

• coordinating agronomy functions with other States in the region and across regional bound-aries as appropriate Area, zone, or field level agronomists provide staff assistance in all NRCS programs. They are responsible for carrying out the requirements of conservation agronomy consistent with technical proficiency, train-

National Agronomy Manual

Agronomy is the science and technology of producing and using plants in agriculture for food, fuel, fiber, and land restoration. It is both a humanitarian career and a scientific one. Agronomy has come to encompass work in the areas of plant genetics, plant physiology, meteorology, and soil science.

Agronomy - Wikipedia

From the different divisions or branches of horticulture, the horticultural crops consist of the olericultural or vegetable crops, pomological or fruit crops and edible nuts, floricultural and other ornamental crops, and nursery crops. In addition, the aromatic crops and the medicinal crops are generally included.

Agronomic Crops vs. Horticultural Crops

Agronomy is a science that helps to feed the world. We can call the Agronomy as backbone of all agricultural sciences, because the management of soil and water, with a view to achieving the produc- tion potential of high yielding varieties, in green revolution, is exclusively an agronomic domain.
