Eating The Sun How Plants

Eating the Sun is the story of a world in crisis; an appreciation of the importance of plants; a history of the earth and the feuds and fantasies of warring scientists; a celebration of how the smallest things, enzymes and pigments, influence the largest things, the oceans, the rainforests, and the fossil fuel economy. Oliver Morton offers a fascinating, lively, profound look at nature's greatest miracle and sounds a much-needed call to arms; illuminating a potential crisis of climatic ...

Eating the Sun: How Plants Power the Planet: Morton ...

Eating the Sun is not just a random title picked by a publisher--it captures how perspective is driven by starting with the 6000K sun and describing how plants make use of all that heat and light. So there's a lot about photosynthesis and metabolism, rather less in details about leaf shape, flowers, insects or seeds.

Living bodies need fuel in the form of food to drive all their activity, and it is green plants that convert the energy from the sun into the starches and sugars that we (and every other living...

Review: Eating the Sun by Oliver Morton | Books | The Guardian

Drosera, commonly known as the sundews, is one of the largest genera of carnivorous plants, with at least 194 species. These members of the family Droseraceae lure, capture, and digest insects using stalked mucilaginous glands covering their leaf surfaces. The insects are used to supplement the poor mineral nutrition of the soil in which the plants grow.

Drosera - Wikipedia

From acclaimed science journalist Oliver Morton comes Eating the Sun, a fascinating, lively, profound look at photosynthesis, nature's greatest miracle. From the physics, chemistry, and cellular biology that make photosynthesis possible, to the quirky and competitive scientists who first discovered the beautifully honed mechanisms of photosynthesis, to the modern energy crisis we face today ...
