XML Web Services - W3Schools

SOAP relies exclusively on XML to provide messaging services. Microsoft originally developed SOAP to take the place of older technologies that don't work well on the internet such as the Distributed Component Object Model (DCOM) and Common Object Request Broker Architecture (CORBA). These technologies fail because they rely on binary messaging.

Understanding SOAP vs REST: Basics And Differences

SOAP Web Services: SOAP (Simple Object Access Protocol) is an XML-based protocol for accessing web services. Its interface is described in a machine-processable format called WSDL (Web Service Definition Language) document.
